

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Canceled)
2. (Previously Presented) A process for production of a wind power installation having a plurality of installation components including at least a rotor, a generator, a machine casing and a pylon, wherein individual installation components are transported by means of a container or a plurality of containers to a building site of the wind power installation and the container or containers are such that they accommodate the pylon of the wind power installation and form a foundation of the wind power installation, comprising sinking the foundation container or containers into a hole in the ground prior to setting up the wind power installation.
3. (Canceled)
4. (Previously Presented) The process of claim 2, further comprising:  
erecting the pylon of the wind power installation using a cable winch which has a motor or manual drive.
- 5-6. (Canceled)

7. (Previously Presented) A method for production of a wind power installation having at least a rotor, a generator, a machine casing, and a pylon, the method comprising:

placing at least one container into the ground so that the at least one container is a foundation for the wind power installation, the at least one container dimensioned to contain the rotor, the generator, the machine casing, and the pylon; and

affixing a lower part of the pylon on a bottom of the at least one container to set up the wind power installation.

8. (Previously Presented) The method according to claim 7, further comprising:

transporting the at least one container containing the rotor, the generator, the machine casing, and the pylon therein to a building site of the wind power installation.

9. (Previously Presented) The method of claim 7, further comprising:  
erecting the wind power installation by means of a cable winch which has a motor or manual drive.

10. (Previously Presented) The method of claim 7, further comprising:  
forming a hole sized to conform with the at least one container.

11. (Previously Presented) The method of claim 7, further comprising:  
filling the at least one container with a medium so that the at least one container is stabilized in the ground.

12. (Currently Amended) The method of claim 7, further comprising:  
coupling a first-further container to a second the at least one container so that the first and second containers are placed into the ground.

13. (Previously Presented) A wind power installation, comprising:  
at least a rotor, a generator, a machine casing, and a pylon; and  
at least one container sunk into the ground so that the at least one container is a  
foundation for the wind power installation, the at least one container dimensioned to contain the  
rotor, the generator, the machine casing, and the pylon.

14. (Previously Presented) The wind power installation of claim 13, further  
comprising:

a means for receiving arranged on a top side of the at least one container and  
operable to receive a lower part of the pylon; and

a means for attaching the pylon on a bottom of the at least one container.

15. (Previously Presented) The wind power installation of claim 13, further  
comprising:

a cable winch operable to erect the pylon.
